

**News Release**

**QUALITY SYSTEM COMPLIANT WITH ISO9001:2000 and AS9100B REQUIREMENTS**

Space Vehicle System Customer Verification Completed August 2008

After a 3-month review by a customer, SpaceAge Control's quality system has been [reaffirmed as compliant \(see letter\)](#) with the requirements of the ISO9001:2000 and AS9100B quality system standards.

The quality system review was performed by a world-renowned supplier of space vehicles where quality system compliance is a way of life.

To verify ongoing compliance with the requirements of its quality system, SpaceAge Control undergoes management reviews (most recently in November 2007), internal audits, and continuous improvement of its quality system documentation.

John Gates, Quality Assurance mentor at SpaceAge Control mentioned, "The confirmation of our quality system's status feels particularly good coming from one of the world's most exacting organizations."

The motivation to comply with ISO9001:2000 and AS9100B was to obtain a more holistic benefit for the entire company and its processes. Noting the benefits of the implementation effort, Tom Anderson III, CEO at SpaceAge Control stated, "The benefits of the quality system's focus on continuous improvement cannot be overstated."
